Proactively addressing climate and environmental factors helps make migration a choice, not a necessity.

According to projections developed by IOM, people exposed to river floods will increase more than triple by 2090.

Transfer of knowledge and skills through diasporas
Unleash green entrepreneurship and innovation
Boost sustainable global value chains
Ease pressure on natural resources in communities of origin

For individuals and households, migration can

Tuvalu and Australia: 1st climate migration agreement
The ‘Falepili Union’, illustrates opportunities for building out migration pathways that can work for the benefit of all.
